Contents

Preface ix
Symbols xi
Abbreviations xvii
1 The atmospheric boundary layer 1
  1.1 Introduction 1
  1.2 History 3
  1.3 Observing the ABL 5
  1.4 ABL modelling 5
  1.5 Applications 6
  1.6 Scope of the book 7
  1.7 Nomenclature and some definitions 8
    Notes and bibliography 12
2 Basic equations for mean and fluctuating quantities 15
  2.1 Turbulence and flow description 15
  2.2 Governing equations for mean and fluctuating quantities 20
  2.3 The simplified mean equations 25
  2.4 The turbulence closure problem 26
  2.5 The second-moment equations 29
  2.6 Turbulent kinetic energy and stability parameters 32
    Notes and bibliography 38
3 Scaling laws for mean and turbulent quantities 40
  3.1 The wind profile: simple considerations 40
  3.2 Wind profile laws: the neutral case 42
  3.3 Monin–Obukhov similarity theory: the non-neutral surface layer 49
  3.4 Generalized ABL similarity theory 60
  3.5 Similarity theory and turbulence statistics 70
    Notes and bibliography 82
4 Surface roughness and local advection 85
  4.1 Aerodynamic characteristics of the land 85
4.2 Scalar roughness lengths
4.3 The vegetation canopy
4.4 Flow over the sea
4.5 Local advection and the internal boundary layer

Notes and bibliography

5 Energy fluxes at the land surface
5.1 Surface energy balance and soil heat flux
5.2 Radiation fluxes
5.3 Evaporation
5.4 Condensation

Notes and bibliography

6 The thermally stratified atmospheric boundary layer
6.1 The convective boundary layer
6.2 The stable (nocturnal) boundary layer
6.3 The marine atmospheric boundary layer
6.4 Mesoscale flow and IBL growth

Notes and bibliography

7 The cloud-topped boundary layer
7.1 General properties of the CTBL
7.2 Observations
7.3 Radiation fluxes and cloud-top radiative cooling
7.4 Entrainment and entrainment instability
7.5 Numerical modelling of the CTBL

Notes and bibliography

8 Atmospheric boundary-layer modelling and parameterization schemes
8.1 Introduction
8.2 Surface temperature
8.3 Surface humidity (soil moisture)
8.4 Canopy parameterization
8.5 Surface fluxes
8.6 Rate equation for ABL depth
8.7 Turbulence closure schemes
8.8 ABL cloud parameterization

Notes and bibliography

9 The atmospheric boundary layer, climate and climate modelling
9.1 Introduction
9.2 Sensitivity of climate to the ABL and to land surface
9.3 Research priorities

Notes and bibliography

Appendices
